## Glass Beverage Dispensers

Glass dispensers which are frequently used at water hydration stations, as well as service of juices and other drinks have recently been the cause of significant cut injuries.

- When buying dispensers, aim to select ones that are **dishwasher safe**. Many of the cheaper versions are not dishwasher safe.
- Ensure that **non-dishwasher safe** dispensers are **washed by hand**. Washing them in a dishwasher can result in them cracking or shattering.

- **Check** each dispenser for **damage**, such as cracks or chips, **before and after** washing them.

- Make sure that they are located on **stable surfaces** and **away from edges**, during use and during storage.

- **Handle dispensers with care**, especially when lifting them off and onto shelving and surfaces to avoid knocks and bumps that can cause damage. If the dispenser is too heavy for you ask for assistance or decant it before moving it.
